Al-Rasedah Technology for Business Solutions

 **WAZUH GOLD PARTNER**

COMPANY PROFILE

Security you can see, operate, and control.

Al-Rasedah Technology is a Saudi cybersecurity company and a Wazuh Gold partner — helping organizations build real security visibility and detection, delivered locally.

WHO WE ARE

A cybersecurity company built for the Kingdom.

Al-Rasedah Technology is a Saudi cybersecurity company focused on one thing: making security visibility and detection genuinely useful in operation. We deploy, engineer, and operate security monitoring built on Wazuh — the open, trusted SIEM and XDR platform — and we support it with a local, Arabic-speaking team.

As a Wazuh Gold partner, we combine recognized platform expertise with hands-on detection engineering. We don't just stand a platform up and hand over a dashboard; we tune it to your environment, document how it works, and make sure the alerts that reach your team are the ones that matter.

We believe openness is about control, not just cost. Building on technology you can inspect, extend, and own means your organization keeps command of its data, its architecture, and its future — with a documented exit path instead of a closed dependency.

DIRECTION

What we're working toward.

VISION

To be the trusted local partner for security visibility and detection in Saudi Arabia — where open technology is operated with real engineering, local expertise, and full customer control.

MISSION

To help Saudi organizations build, tune, and operate effective detection on technology they can understand and own — backed by honest scope, local support, and confidentiality suited to sensitive environments.

WHAT WE STAND BY

1 Openness means control

We build on platforms you can inspect, document, and own — no unnecessary lock-in.

2 Engineering over installation

Detection only works when it's tuned, documented, and validated — not left at defaults.

3 Honest scope

We define support and responsibilities clearly, and we don't overpromise SLAs, compliance, or security.

4 Local and confidential

A Saudi partner under local jurisdiction, keeping sensitive work close to home.

5 Capability, transferred

We train your team so you can run the platform with confidence — with or without us.

WHAT WE DO

From log collection to real detection capability.

We focus on the engineering layer around Wazuh: architecture, useful data, tuned alerts, documented rules, analyst workflows, and decision-supporting reporting.

1. Deploy Wazuh

Architecture, installation, agent onboarding, and log-source integration — done right for your environment, whether client-managed cloud, on-premise, or an official hosted service.

2. Engineer detection

Rules, decoders, dashboards, alert tuning, and detection validation, built and documented within an agreed scope — so the signals that reach your team are the ones that matter.

3. Operate & support

Ongoing tuning, monitoring support, scheduled reviews, and clearly-defined operational responsibilities — sized to your team, with local first-line support and escalation to Wazuh.

WAZUH GOLD PARTNER

Wazuh's platform, plus a local layer.

Wazuh gives you the platform and its global services. Al-Rasedah adds a local layer on top — Arabic-speaking delivery, Saudi business hours, local jurisdiction, and a single point of contact who owns your ticket and escalates to Wazuh when a platform-level issue calls for it.

Al-Rasedah local layer

Local support & escalation · consulting for sensitive environments · bilingual training

Wazuh services

Professional support · consulting · training — the platform and its global expertise

THE LOCAL LAYER WE DELIVER

Local support & escalation

First-line support in Arabic on Saudi hours, with a fast local first response and priority escalation to Wazuh for platform-level issues.

Consulting for sensitive environments

For government and semi-government work — sensitive architecture and logs stay with a local partner under Saudi jurisdiction, aligned to NCA ECC, SAMA CSF, and PDPL.

Bilingual training

Hands-on enablement in Arabic and English, taught on your own environment so your team can operate with confidence.

Security assessments

Practical reviews of architecture, coverage, alert quality, log sources, dashboards, and operational gaps — with prioritized recommendations.

Engagements combine a Wazuh subscription with an Al-Rasedah local services fee, quoted per engagement. Wazuh is a trademark of Wazuh, Inc. Being a Wazuh Gold partner does not constitute a compliance or security guarantee.

WHY WORK WITH US

Local expertise, engineered outcomes.

Wazuh Gold Partner

Recognized platform expertise, combined with our own detection engineering — the platform is tuned to you, not left at defaults.

Local and Arabic-speaking

Requirements, support, and reviews handled locally, in Arabic, on your schedule and timezone.

Confidentiality & sovereignty

A Saudi partner under local jurisdiction and NDA — suited to sensitive government and semi-government environments.

Engineering-first

We make the platform detect: tuned alerts, documented rules, analyst-ready workflows, and reporting that supports decisions.

No lock-in

Open, controllable technology underneath — you keep full command of your data and a documented exit path.

Honest by default

Clear scope and responsibilities, no overstated service levels, compliance claims, or security guarantees.

SECTORS WE'RE BUILT TO SERVE

Al-Rasedah is positioned to support regulated and security-sensitive organizations across the Kingdom, including:

Government & semi-gov

Sovereignty and confidentiality by default

Financial services

Monitoring aligned to SAMA expectations

Healthcare

Visibility across clinical and IT systems

Education

Campus and research infrastructure

Energy & utilities

IT and operational environments

Enterprise & IT

Multi-site and cloud estates

LET'S TALK

Start with a practical assessment.

Tell us your environment and goals, and we'll recommend the right mix of deployment, engineering, support, consulting, and training — with a combined quote.
